

AIRLESS KIT

Features

The Airless Kit consists of a pressure multiplier, installable on the Trasmatic, which allows the treatment of the hollow glass surfaces with the use of medium pressure airless spray guns (max 15 bar). It allows the atomisation of the product used, by preventing or limiting the dripping during the drying step. It prevents leakages and it improves the treatment uniformity. This function, for the materials and devices used, keeps the HACCP standards and is therefore also used in the food industry.

Technical specifications

Material	Stainless steel
Maximum capacity	l/h
Maximum air pressure	7 bar
Maximum output pressure	15 bar
Supply voltage	220VAC
Power	W
